XIFIN is at the epicenter of provider, patient, and payor data exchange in an evolving healthcare market

XIFIN delivers solutions that enable diagnostic providers to increase revenue, improve operating efficiencies, collaborate and share data effectively, and ultimately, to improve health outcomes and lower the costs of healthcare management.

XIFIN Solutions

Revenue Cycle Management:
XIFIN RPM is a comprehensive, highly automated cloud-based RCM solution for laboratories and other diagnostic services providers that maximizes cash collection and profitability, improves efficiency, and delivers visibility and control over financial operations. Available for both in-house and outsourced billing operations. With unequaled financial integrity, XIFIN RPM delivers a FASB, GAAP, and SOX compliant and general ledger-ready financial package. Comprehensive business intelligence and analytics support management, operational, and reporting needs.

Laboratory Information Systems:
XIFIN LIS is the only SaaS-based platform that offers multi-specialty workflows and collaboration tools necessary to support precision medicine programs. It increases laboratory testing capacity, shortens turnaround time, creates new revenue stream opportunities and makes it easier to connect to other healthcare partners. XIFIN LIS improves operational efficiencies and delivers the flexibility that enables today's laboratories to thrive.
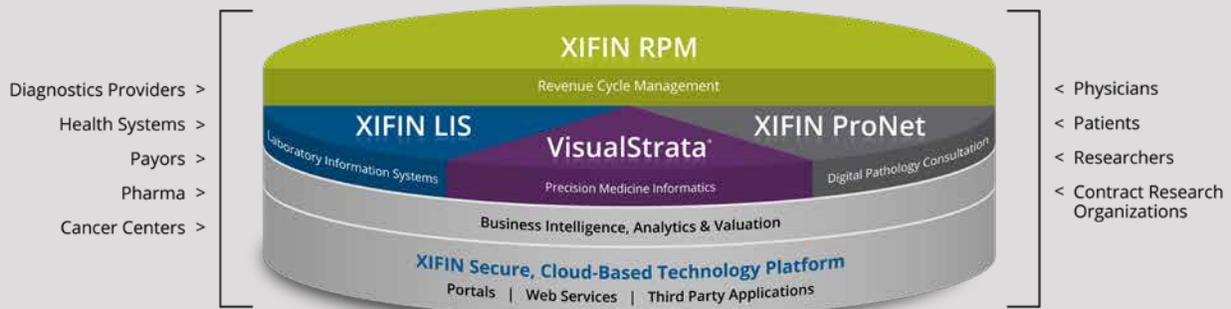

Digital Pathology Consultations:
XIFIN ProNet is a secure cloud-based digital pathology consultation solution that provides integrated viewing of all relevant medical images, data, and reports for secondary consultations. With turnkey functionality that does not depend on proprietary digital image accessibility or closed network integration, XIFIN ProNet helps breakdown communications silos so diagnostic service providers can consult with colleagues both inside and outside of their networks, across campus and around the world.

Precision Medicine Informatics:
VisualStrata is precision medicine platform that aggregates, curates and intelligently visualizes patient diagnostic, treatment and clinical information. VisualStrata applications include optimized patient-centered case management, healthcare data intelligence and research, value-based healthcare and quality reporting, and a clinical collaboration and virtual tumor board environment.
